# saia-engine

- ongoing effort: SAIA2
- "rewrite" where Kong and is replaced by custom webapp with DB (saia-engine)
- Why?
  - ▶ fine-grained accounting, access control
  - ▶ budget limited API tokens
  - ▶ Azure and OpenWeight over one API key
  - ▶ goal: let customers host their inference jobs

## saia-connector

- replacement for SSH Proxy
- slightly snappier responses in ChatAI
- allows connecting arbitrary jobs from other clusters

## Status

- beta level
- Chat AI uses SAIA1 at the moment
- ChatAI migration (re)planned until Q2

# Chat AI Beta

- https://beta.chat-ai.academiccloud.de/
- Users get access to new features early
- We get usage experience with new features
- Currently running on SAIA2

## Data Class D support

- Last year we achieved technical prerequisites for data class D!
- `https://info.gwdg.de/news/announcement-class-d-support/`
- achieved via end-to-end encryption (e2ee) for conversation messages
